PROCESSING STEPS

Date	31 January 2026
Team ID	LTVIP2026TMIDS36523
Project Name	Empowering India: analysing the evaluation of union budget allocation
Maximum Marks	Marks

EMPOWERING INDIA: ANALYSING THE EVALUATION OF UNION BUDGET ALLOCATION FOR SUSTAINABLE GROWTH

MILESTONE -I: DATA COLLECTION & EXTRACTION FROM THE DATABASE

ACTIVITY-1: COLLECT THE DATASET

PURPOSE:

To obtain reliable, structured, and authentic data for analysis.To obtain authentic and reliable data from a trusted source.To build a strong foundation for analysis and visualization.To ensure data credibility and reproducibility of results.

USES:

Data collection provides the raw material required for analysis and visualization. It enables the use of real-world data for practical learning and research. It also supports data authenticity, validation, and reproducibility of the project.

STEPS:

1. Go to kaggle.com
2. Search:Indian Union Budget FY 21-22 till 23-24
3. Open the dataset page
4. Click Download
5. Extract the ZIP file
6. Save the CSV file in a known folder, e.g.Documents/Budget_Project/Data/

ACTIVITY-2: UNDERSTANDING THE DATA SET

PURPOSE:

Data understanding involves studying the structure, meaning, and scope of the dataset. It helps in identifying important fields, relationships, and data types. This step also allows early detection of errors and inconsistencies.

USES:

Data understanding helps in selecting relevant fields for analysis and visualization. It supports correct interpretation of data and relationships between variables. It also prevents errors and misanalysis caused by misunderstanding the dataset.

STEPS:

1. Open the file,Right-click CSV → Open with Excel
2. Identify structure
3. Check:Rows → data entries (schemes/budget records),Columns → attributes (Category, Ministry, Scheme, Year-wise budgets
4. Understand columns Manually read headers like:

➔ Category
➔ Ministry/Department
➔ Scheme
➔ Actuals 2021-2022 Revenue
➔ Actuals 2021-2022 Capital
➔ Actuals 2021-2022 Total
➔ Budget Estimates 2022-2023 Total
➔ Budget Estimates 2023-2024 Total

6. Identify data types

➔ Text columns → Category, Ministry, Scheme
➔ Numeric columns → Budget values
➔ Detect data issues-Look for:
➔ Blank cells
➔ Duplicate column names
➔ Extra spaces
➔ Repeated headers
➔ Inconsistent naming
➔ Zero values

ACTIVITY-3: DATA LOADING

PURPOSE:

Data loading is the process of importing the dataset into analysis tools like Excel and Tableau. It makes raw data accessible and usable for processing. This step connects the dataset to visualization and analysis environments.

USES:

Data loading makes the dataset available inside Excel and Tableau for processing. It allows the use of analytical and visualization tools on the data. It also enables integration between different platforms for analysis workflows.

STEPS:

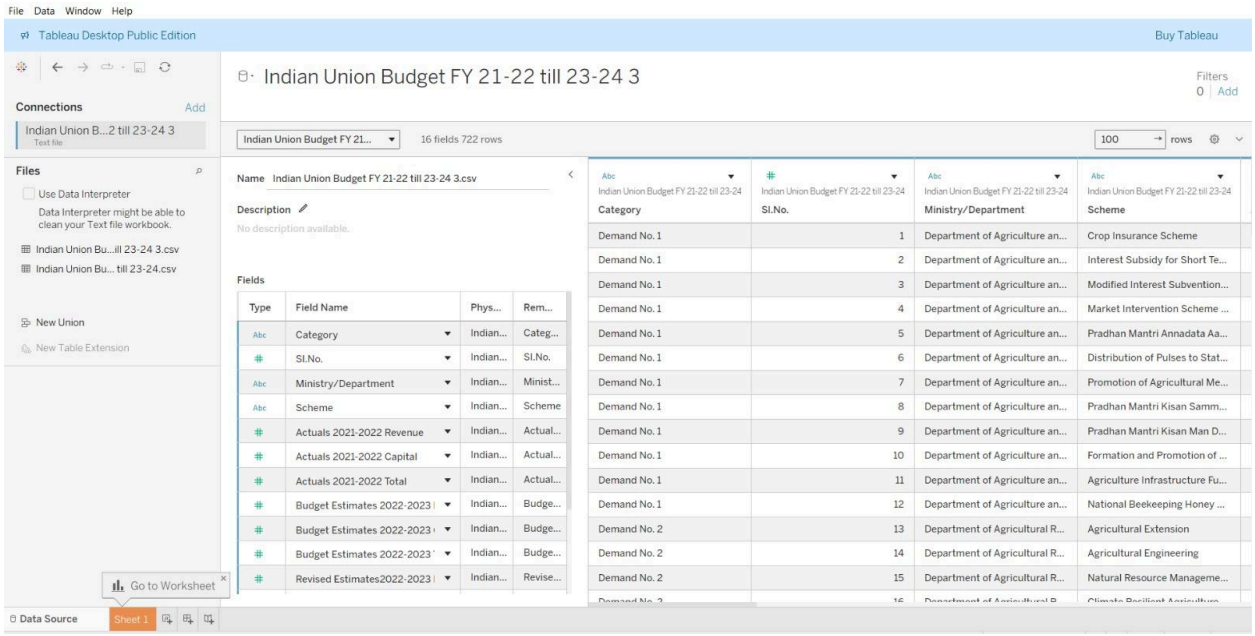
1. Rename column headers
2. Remove:

➔ Line breaks
➔ Extra spaces
➔ Duplicate names
➔ Special charactersm

3. Fix duplicate columns
4. Format data types

➔ Select numeric columns → Format as Number
➔ Select text columns → Format as Text
➔ Handle missing values
➔ Select blank cells → Fill with 0 or NA

5. Save cleaned file



MILESTONE -2: DATA PREPARATION

ACTIVITY-1: PREPARE THE DATA FOR VISUALISATION

PURPOSE:

The purpose of preparing data for visualization is to organize cleaned data into a clear and structured format. It ensures the data is compatible with visualization tools like Excel and Tableau. This step makes accurate and meaningful visual analysis possible.

USES:

Preparing data for visualization enables the creation of clear and reliable charts and dashboards. It supports easy comparison, grouping, and trend analysis of data. It also improves understanding and interpretation of visual insights.

STEPS:

1. Open the dataset in Excel.
2. Clean the column names (remove spaces, duplicates, and symbols).
3. Format text columns as Text and number columns as Number.
4. Fill empty cells with 0 or NA.
5. Remove empty rows and columns.
6. Create basic summary tables using Pivot Tables.
7. Save the file as Visualization_Ready_Data.xlsx.
8. Open Tableau.
9. Connect Tableau to the Excel file.
10. Check data types and rename fields.
11. Data is ready for visualization.

MILESTONE -3:DATA VISUALISATION

ACTIVITY-1: NO OF UNIQUE VISUALISATIONS

PURPOSE:

The purpose of visualizations is to convert raw data into visual forms that are easy to understand. They help in identifying patterns, trends, and relationships within the data. Visualizations make complex information simple, clear, and meaningful.

USES:

Visualizations are used to analyze data quickly and effectively. They support decision-making by showing comparisons, growth, and performance trends. They also improve communication of insights to stakeholders and audiences.

VISUALIZATION-1: TOP 5 SCHEMES 2021-2022

PURPOSE:

This visualization highlights the five schemes that received the highest funding in 2021–2022. It helps identify government priority programs. It provides a focused view of major financial investments.

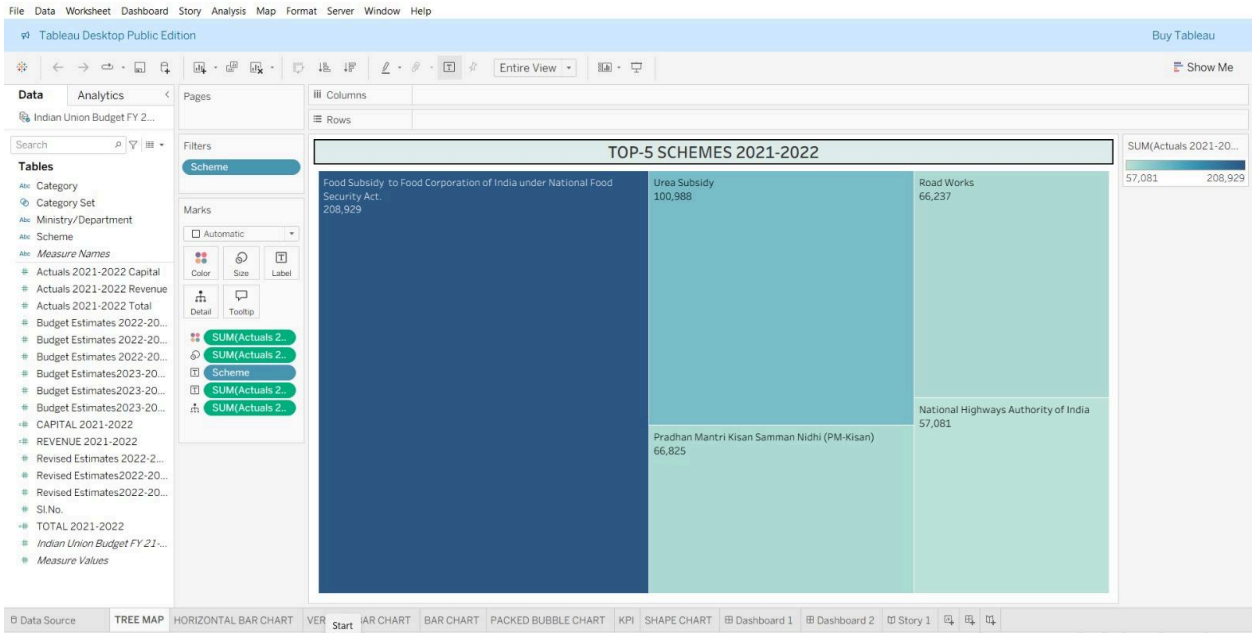
USES:

It is used to analyze funding concentration. It helps compare major schemes easily. It supports policy and impact analysis.

STEPS:

1. Open Tableau → Connect to Excel dataset
2. Go to a new worksheet
3. Drag Scheme → Filters → Select all
4. Drag Actuals 2021-2022 Total → Rows
5. Click Show Me → Select Tree Map

6. Drag Scheme → Label
7. Drag Actuals 2021-2022 Total → Size
8. Drag Actuals 2021-2022 Total → Color
9. Right-click Scheme → Create → Top → Top 5 by SUM(Actuals 2021-2022 Total)
10. Rename title → Top 5 Schemes 2021–2022



VISUALIZATION-2: 2022-2024 BUDGET ESTIMATION CATEGORY WISE

PURPOSE:

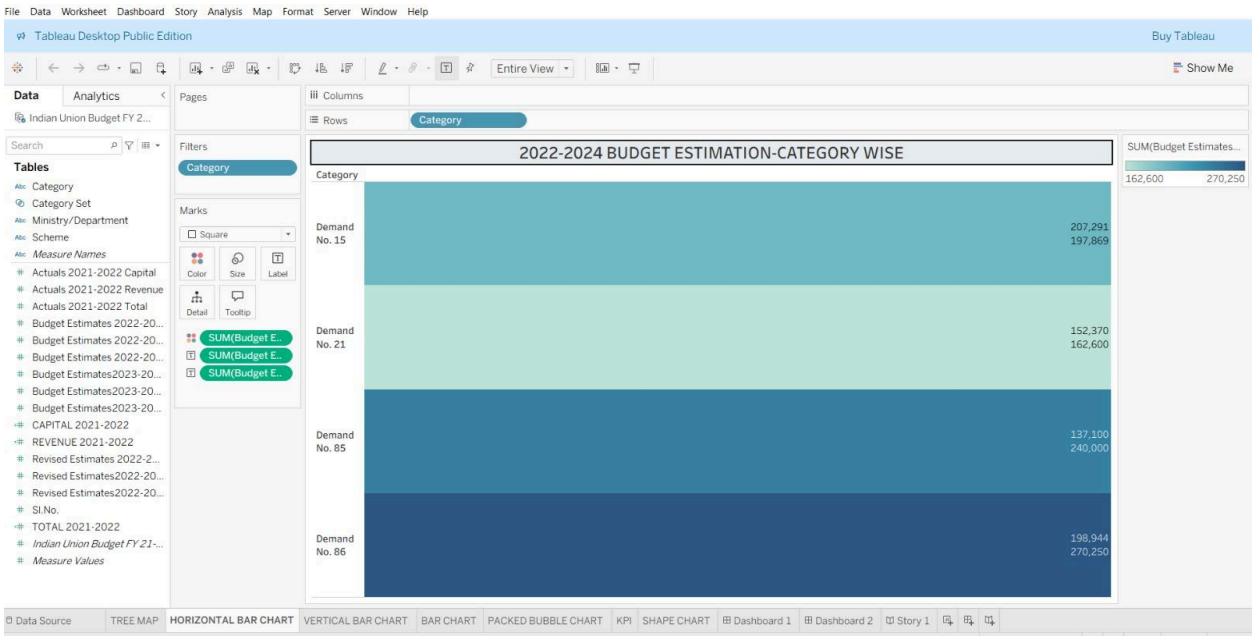
This visualization shows budget allocation trends across categories from 2022 to 2024. It helps understand sector-wise budget planning. It reveals priority areas of government spending.

USES:

It is used for sector comparison. It supports trend analysis across years. It helps in strategic planning and forecasting.

STEPS:

1. New worksheet
2. Drag Category → Rows
3. Drag Budget Estimates 2022-23 → Columns
4. Drag Budget Estimates 2023-24 → Columns
5. Click Show Me → Bar Chart
6. Marks → Color → Drag Measure Names
7. Marks → Label → Drag Measure Values
8. Sort categories
9. Rename title → 2022–2024 Budget Estimation – Category Wise



VISUALIZATION-3: 2022-24 BUDGET ESTIMATION DEPARTMENT WISE

PURPOSE:

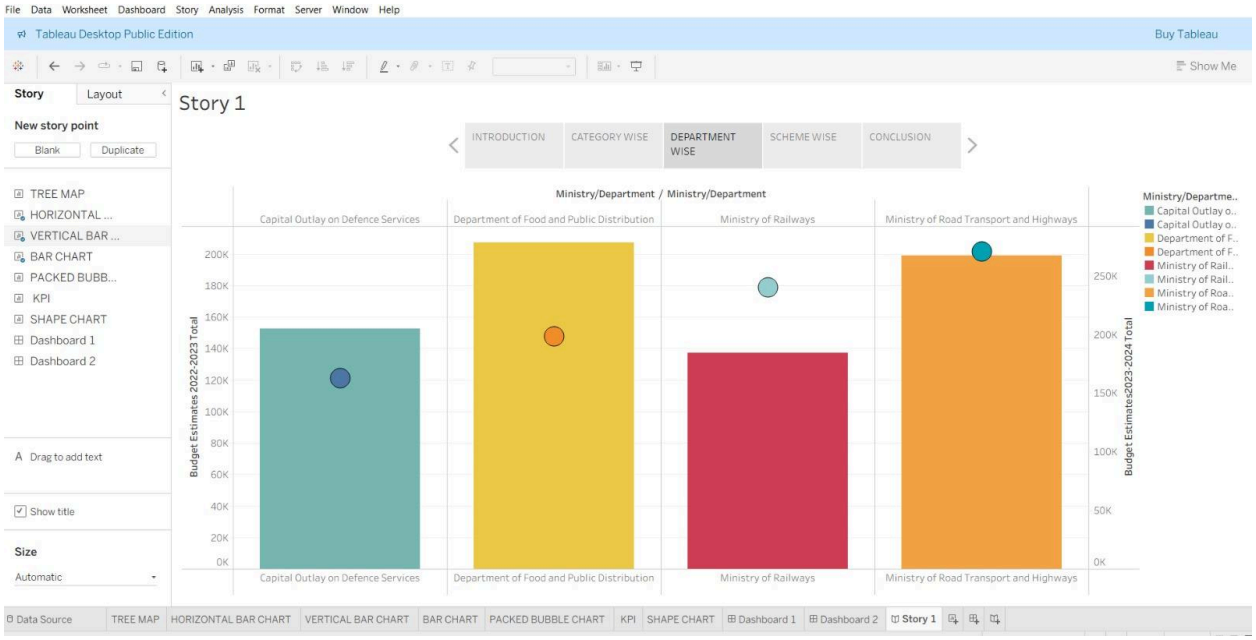
This visualization represents budget distribution among departments from 2022 to 2024. It shows how funds are allocated institutionally. It helps understand departmental priorities.

USES:

It is used for performance and funding comparison. It supports resource allocation analysis. It helps identify high-investment departments.

STEPS:

1. New worksheet
2. Drag Ministry/Department → Columns
3. Drag Budget Estimates 2022-23 → Rows
4. Drag Budget Estimates 2023-24 → Rows
5. Click Show Me → Vertical Bar Chart
6. Drag Measure Names → Color
7. Drag Measure Values → Label
8. Sort by value
9. Rename title → 2022–2024 Budget Estimation – Department Wise



VISUALIZATION-4: 2022-2024 BUDGET ESTIMATION SCHEME WISE

PURPOSE:

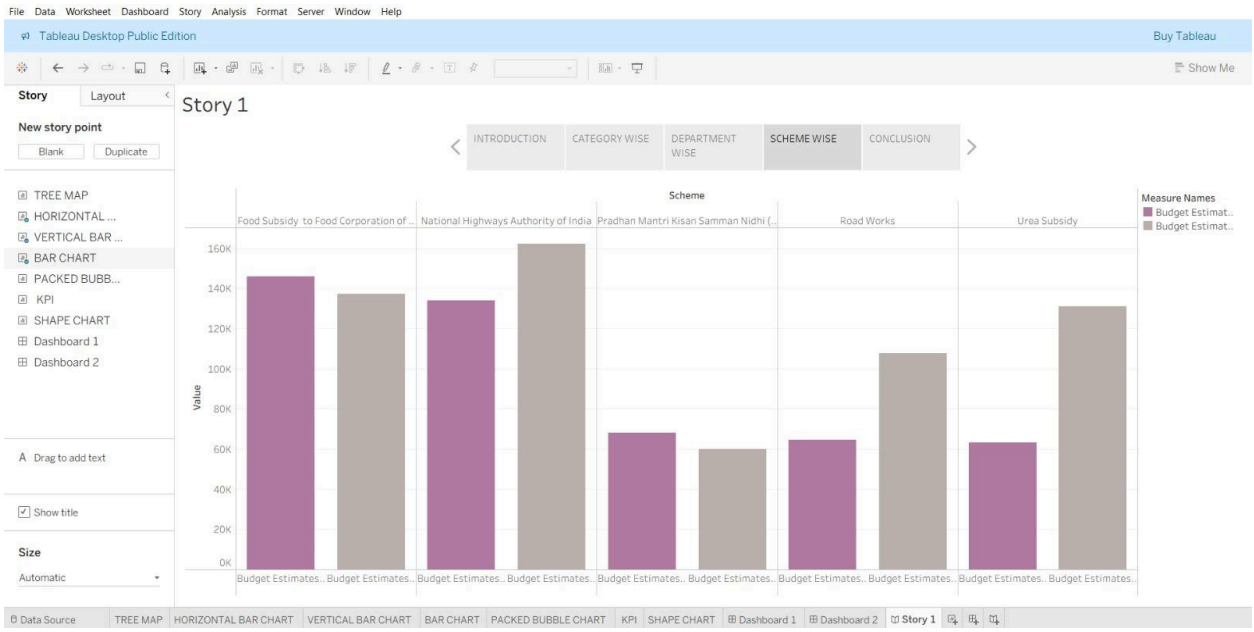
This visualization displays budget allocation trends for individual schemes. It helps track scheme-level funding growth and decline. It supports detailed financial planning analysis.

USES:

It is used to monitor scheme performance. It supports program-level evaluation. It helps in identifying high-impact schemes.

STEPS:

1. New worksheet
2. Drag Scheme → Rows
3. Drag Budget Estimates 2022-23 → Columns
4. Drag Budget Estimates 2023-24 → Columns
5. Show Me → Bar Chart
6. Drag Measure Names → Color
7. Drag Measure Values → Label
8. Sort by value
9. Rename title → 2022–2024 Budget Estimation – Scheme Wise



VISUALIZATION-5: TOP 5 DEPARTMENT/ MINISTRY WISE FOR 2021-2022

PURPOSE:

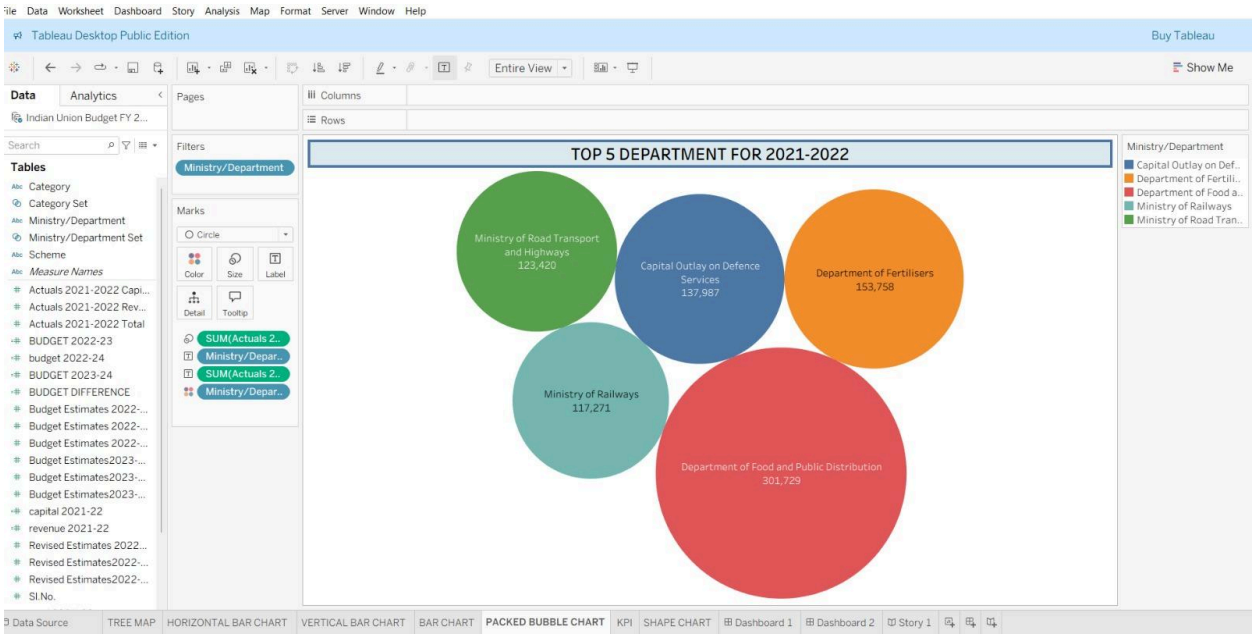
This visualization identifies the top-funded ministries/departments in 2021–2022. It shows where major government spending occurred. It highlights institutional funding priorities.

USES:

It is used for comparison among departments. It supports policy evaluation. It helps in understanding government investment focus.

STEPS:

1. New worksheet
2. Drag Ministry/Department → Detail
3. Drag Actuals 2021-2022 Total → Size
4. Drag Actuals 2021-2022 Total → Color
5. Show Me → Packed Bubbles
6. Filter → Ministry/Department → Top → Top 5 by SUM(Actuals 2021-2022 Total)
7. Drag Ministry/Department → Label
8. Rename title → Top 5 Department for 2021–2022



VISUALIZATION-6: TOTAL AMOUNT INVESTED

PURPOSE:

This visualization represents the overall financial investment across all years and categories. It provides a macro-level view of government spending. It summarizes total budget allocation.

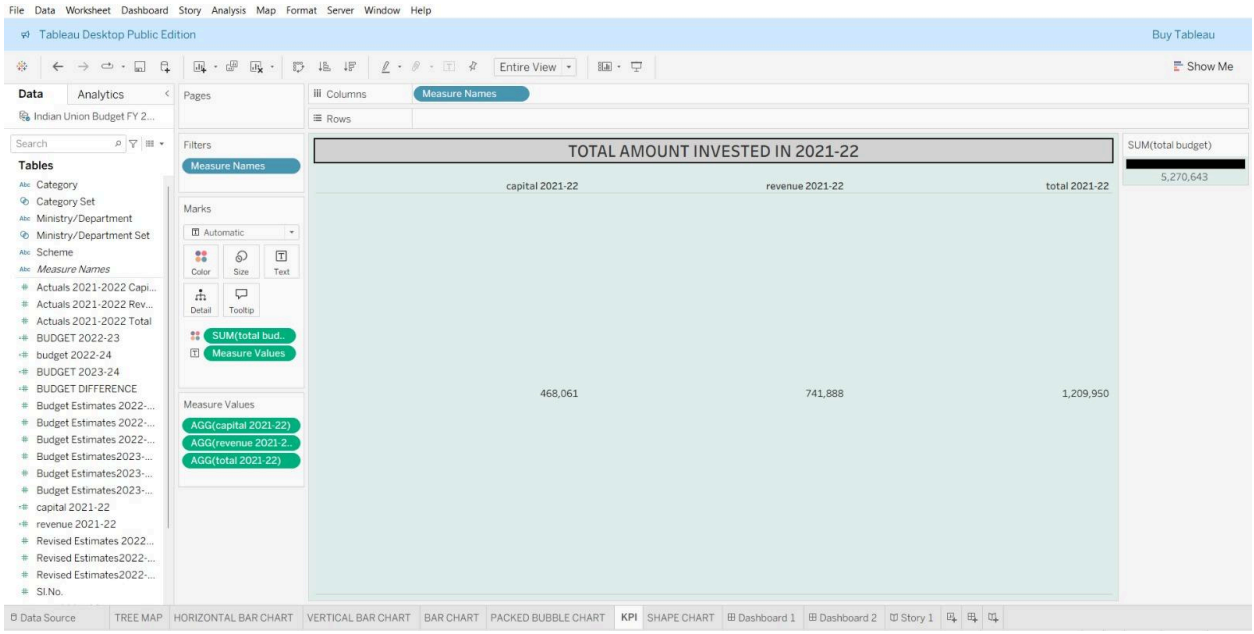
USES:

It is used for financial overview analysis. It supports budget scale understanding. It helps in high-level decision-making.

STEPS:

1. New worksheet
2. Create calculated fields - open calculated field box
3. Enter sum(actual 2021-2022revenue)
4. Next open another calculated field box
5. Enter sum(actuals 2021-2022 capital)
6. Press ok
7. Next open another calculated field box
8. Enter sum(actuals 2021-2022 revenue)+ sum(actuals 2021-2022 capital)

9. Press ok
10. Drag capital 2021-22 → Measure Values
11. Drag revenue 2021-22 → Measure Values
12. Drag Actuals 2021-2022 Total → Measure Values
13. Drag Measure Names → Columns
14. Show Me → Text Table / KPI
15. Center align label
16. Rename title → Total Amount Invested in 2021–22



VISUALIZATION-7: TOTAL BUDGET - CATEGORY WISE

PURPOSE:

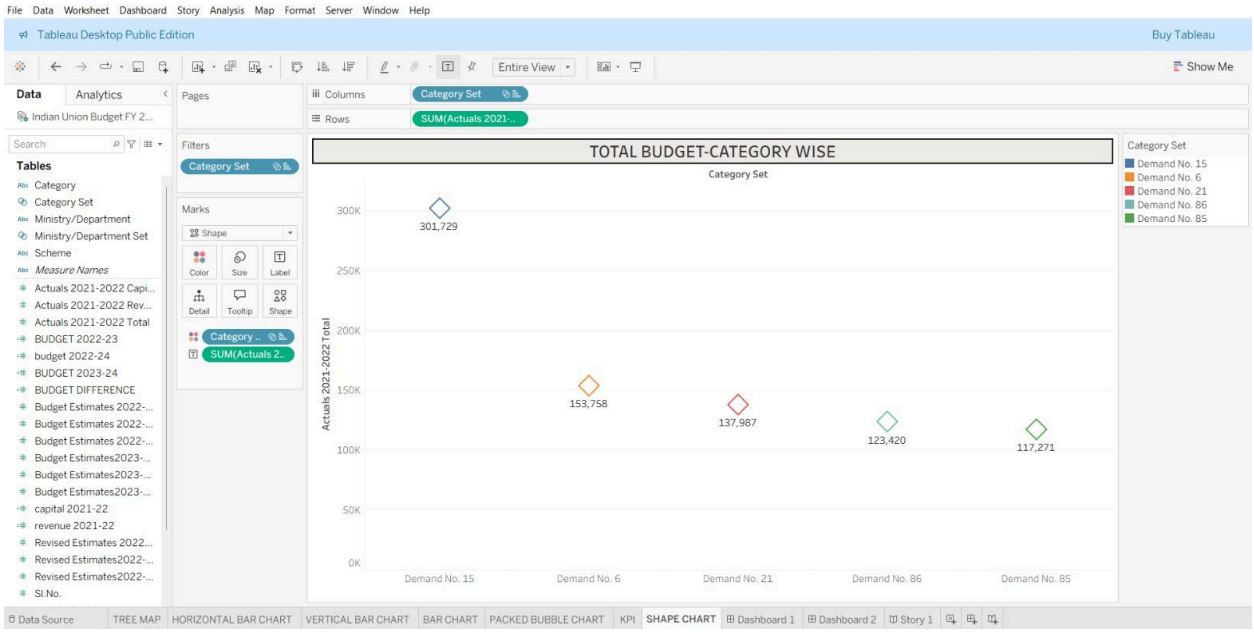
This visualization shows total budget allocation for each category. It helps understand sectoral distribution of funds. It highlights priority sectors.

USES:

It is used for category comparison. It supports policy and sector analysis. It helps in strategic resource planning.

STEPS:

1. New worksheet
2. Drag Category → Rows
3. Drag Actuals 2021-2022 Total → Columns
4. Marks → Change type to Shape
5. Drag Category → Shape
6. Drag Actuals 2021-2022 Total → Label
7. Format → Increase size
8. Rename title → Total Budget – Category Wise



MILESTONE-4: DASHBOARD

ACTIVITY-1: RESPONSIVE AND DESIGN OF DASHBOARD

PURPOSE:

The purpose of an interactive dashboard is to present multiple insights in a single unified interface. It allows users to explore data dynamically using filters and controls. It improves understanding through real-time interaction and visual clarity.

USES:

Interactive dashboards are used for real-time data exploration and analysis. They support quick comparison and trend identification. They help users make data-driven decisions efficiently.

DASHBOARD -1: INSIGHTS FOR UNION BUDGET ALLOCATION (2021-2022)

PURPOSE:

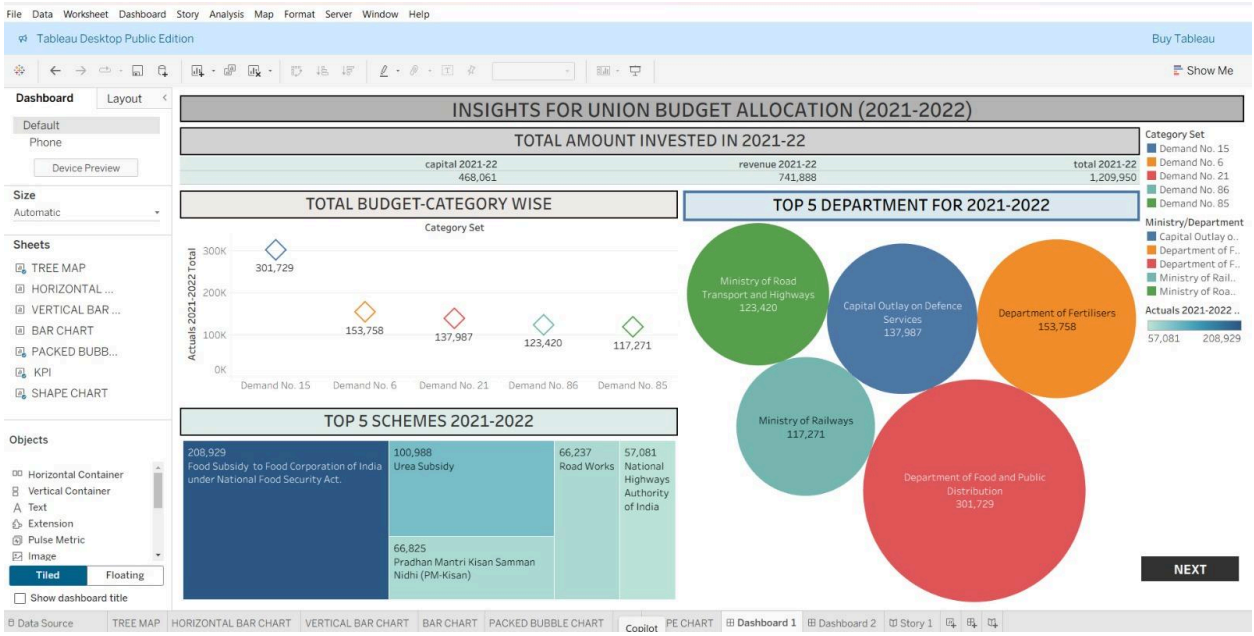
The purpose of Dashboard 1 is to provide an overview of Union Budget allocation for 2021–2022. It presents key insights such as top schemes, top departments, category-wise budget, and total investment. It serves as a summary-level analytical view.

USES:

Dashboard 1 is used for quick understanding of major budget allocations. It supports comparison across schemes, departments, and categories. It helps decision-makers identify priority investment areas.

STEPS:

1. Click Dashboard → New Dashboard
2. Set Size → Automatic
3. Drag a Vertical Container into the dashboard
4. Inside it, drag a Horizontal Container (Top section)
5. Now place worksheets one by one.
6. Drag another Horizontal Container below it (Bottom section)
7. Drag Top 5 Schemes 2021–2022 (Tree Map) → Left
8. Drag Total Budget – Category Wise (Shape Chart) → Right
9. Drag Total Amount Invested (KPI/Text View) → Center
10. Drag Top 5 Department 2021–2022 (Packed Bubbles) → Center bottom
11. Drag a Text object to the right side (vertical title area)
12. Enter:INSIGHTS FOR UNION BUDGET ALLOCATION (2021–2022)
13. Click each worksheet → Dropdown → Use as Filter
14. Drag a Button object into the bottom-left corner
15. Button dialog box:
16. Navigate to: `Dashboard 2`
17. Button style: Text
18. Text:NEXT
19. Click OK
20. Click the button
21. Go to Layout tab
22. Adjust: Size, Padding, Alignment
23. Align visuals properly, Adjust spacing and padding , Resize charts for balanceRemove unnecessary gridlines
24. File → Save



DASHBOARD -2: INSIGHTS FOR UNION BUDGET ALLOCATION (2022-2024)

PURPOSE:

The purpose of Dashboard 2 is to analyze budget estimation trends from 2022 to 2024. It provides category-wise, department-wise, and scheme-wise budget projections. It focuses on future planning and allocation patterns.

USES:

Dashboard 2 is used for trend analysis and future budget comparison. It supports forecasting and planning activities. It helps understand changes in funding priorities over time.

STEPS:

1. Click Dashboard → New Dashboard
2. Rename it as Dashboard 2
3. Set Size → Automatic
4. Drag a Vertical Container onto the dashboard
5. Drag a Horizontal Container into the top of the vertical container
6. Drag another Horizontal Container into the bottom of the vertical container
7. Now place worksheets one by one
8. Drag Category Wise 2022–2024→ Left side
9. Drag Department Wise 2022–2024→ Right side
10. Drag Scheme Wise 2022–2024→ Full width
11. Drag a Text object to the top
12. Enter title:Insights for Union Budget Allocation (2022–2024)
13. Drag a Button object to the top-left corner
14. In the dialog box:
15. Navigate to:Dashboard 1`
16. Button style:Text
17. Text: BACK
18. Click Ok
19. Align all charts properly
20. Adjust spacing and padding
21. Resize visuals for balance
22. Format fonts and colors
23. Click each worksheet → Dropdown → Use as Filter
24. File → Save

MILESTONE-5: STORY

ACTIVITY-1: NO OF SCENES OF STORY

PURPOSE:

The purpose of the story is to present budget insights in a structured and narrative format. It guides users through different analytical perspectives step-by-step. It transforms dashboards and charts into a clear data story.

USES:

The story is used for clear communication of insights. It supports presentation, explanation, and interpretation of data. It helps stakeholders understand budget patterns logically and easily.

STEPS:

1. Click Story tab at the bottom
2. Click New Story
3. Rename the story → `Union Budget Story'
4. Set Size → Automatic
5. Click Blank story point
6. Now drag a text box and add a brief introduction
7. Now click a blank story point
8. Drag Category Wise worksheet into the story canvas
9. Rename story point → `Category Wise`
10. Click Add a blank story point
11. Drag Department Wise worksheet
12. Rename → `Department Wise`
13. Click Add a blank story point
14. Drag Scheme Wise worksheet
15. Rename → `Scheme Wise`
16. Click Blank story point
17. Now drag a text box and add a brief conclusion
18. . At the top, click Layout
19. Enable Story Navigator
20. Ensure tabs appear as:

MILESTONE-6: PERFORMANCE TESTING

ACTIVITY-1: AMOUNT OF LOADED DATA

PURPOSE:

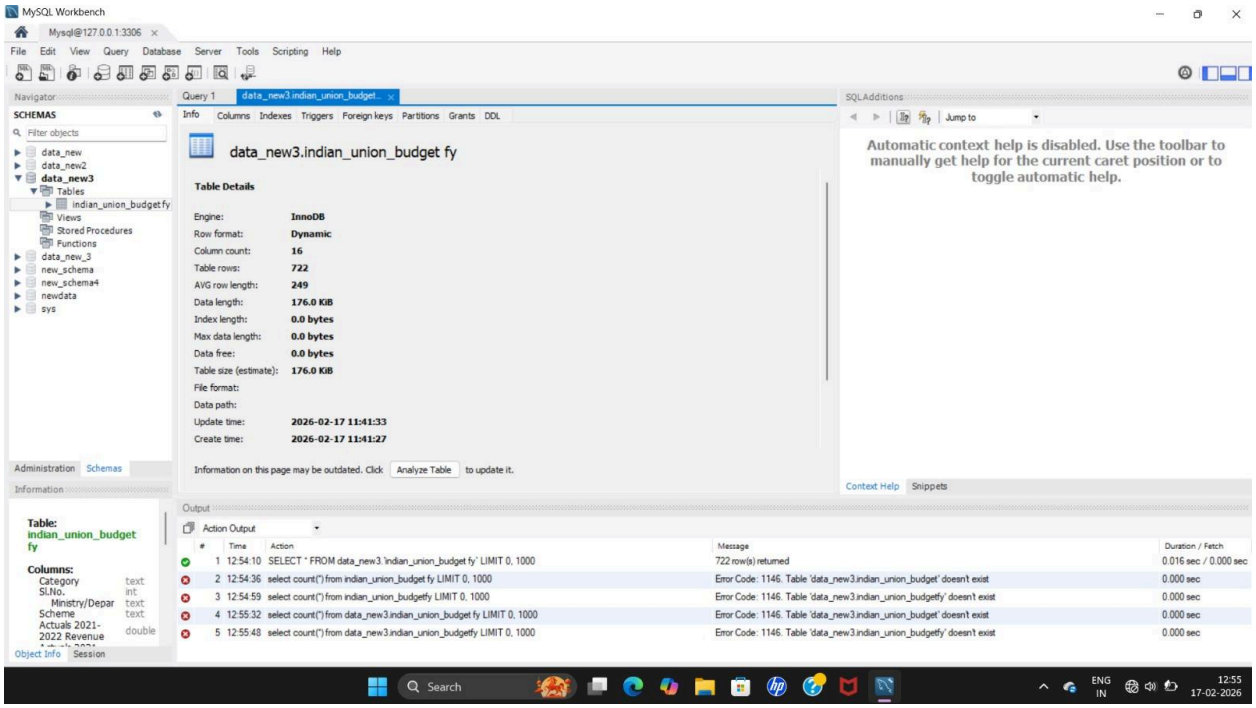
To assess the system's ability to manage and process large volumes of Union Budget data efficiently.To evaluate performance under high data load conditions without system failure.To identify limitations in storage, memory usage, and processing capacity.

USES:

Helps improve database structure and optimize data retrieval speed.Ensures smooth analysis of multi-year financial allocations and sector-wise data.Supports reliable performance even when historical and current data are combined.

STEPS:

1. The amount of data that is rendered to a database depends on the size of the dataset and the capacity of the database to store and retrieve data.
2. Open the MySQL Workbench, go to the database then click to expand the tables,select the table and click on (i) button to get the information related to table such as column count,table rows etc.



ACTIVITY-2: UTILISATION OF FILTERS

PURPOSE:

The filters are used To examine how quickly the system responds when different filters are applied.To test the accuracy of filtered results across multiple selection combinations.To ensure system stability during dynamic data segmentation.

USES:

Enables users to compare ministries, sectors, and years efficiently.Improves decision-making through precise and quick filtered insights.Enhances user experience by reducing delay during interactive analysis.

STEPS:

1. Open the worksheet with the dataset.
2. Drag the required field to the Filters shelf.
3. Select the desired filter values.
4. Click Show Filter to display it on the worksheet.
5. Choose the appropriate filter type (dropdown, list, slider).
6. Test the filter by selecting different values and verify updates.

ACTIVITY-3: NO OF CALCULATION FIELDS

PURPOSE:

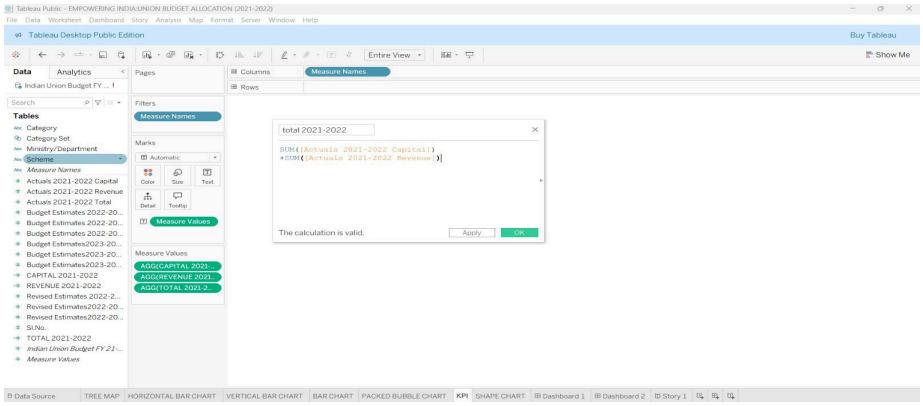
Calculation fields are used to validate the correctness of computed metrics such as growth rate and percentage allocation.To test system performance when executing complex financial formulas. ensure real-time recalculation when data inputs or filters change.

USES:

Provides accurate analytical outputs for budget comparison and trend analysis.Strengthens data reliability and reduces calculation errors.Supports advanced financial evaluation for sustainable growth assessment.

STEPS:

1. Open Tableau and connect your dataset.
2. In the Data pane (left side where all fields are listed), Right-click ? choose Create Calculated Field.
3. A dialog box opens ? give it a Name
4. Write your formula in the editor
5. Then press ok
6. Calculated field will be created.



ACTIVITY-4: NO OF VISUALISATIONS

PURPOSE:

Visualizations are used to evaluate dashboard performance when multiple charts are displayed simultaneously.To measure system responsiveness during interactive visualization updates.To identify performance issues caused by excessive graphical elements.

USES:

Ensures smooth interaction between charts and cross-filtering features.Improves clarity in presenting complex financial information visually.Maintains consistent system speed even with multiple visual components.

No of visualisations and / graphs:

1. Total Amount Invested
2. Total Budget- Category Wise
3. Top 5 Department/Ministry Wise for 2021-2022
4. Top 5 Schemes 2021-2022
5. 2022 – 2024 – Budget Estimation – Category Wise
6. 2022 – 2024 – Budget Estimation – Department Wise
7. 2022 – 2024 – Budget Estimation – Scheme Wise

MILESTONE-7: WEB INTEGRATION

ACTIVITY-1: PUBLISHING

PURPOSE:

Publishing helps us to track and monitor key performance metrics, to communicate results and progress. help a publisher stay informed, make better decisions, and communicate their performance to others.

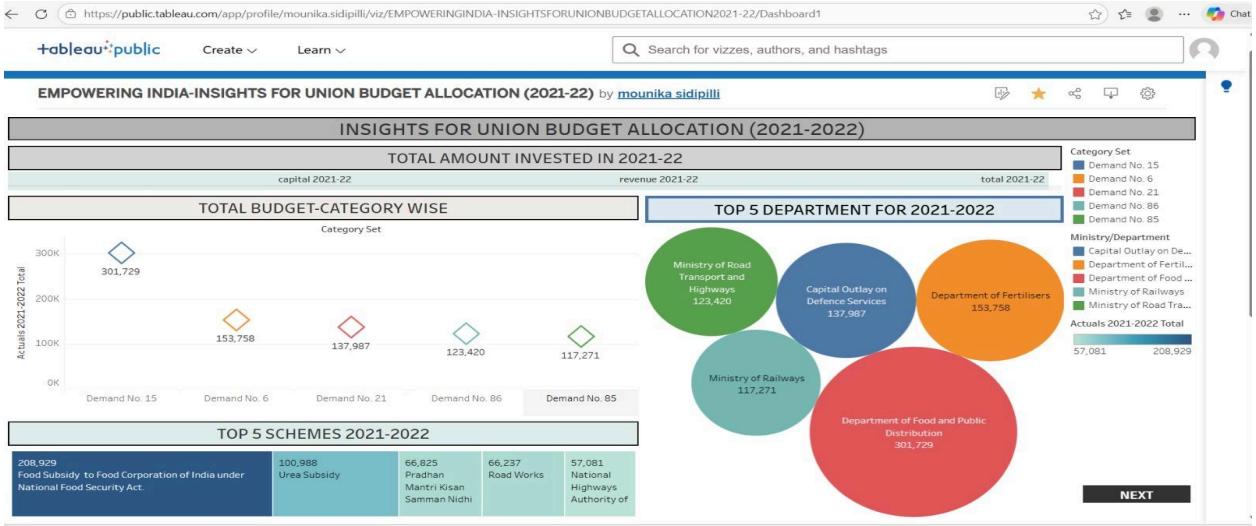
USES:

Helps share Union Budget insights with users without giving Tableau access.Supports real-time data interaction through embedded links.Improves accessibility across devices via web browsers**.**

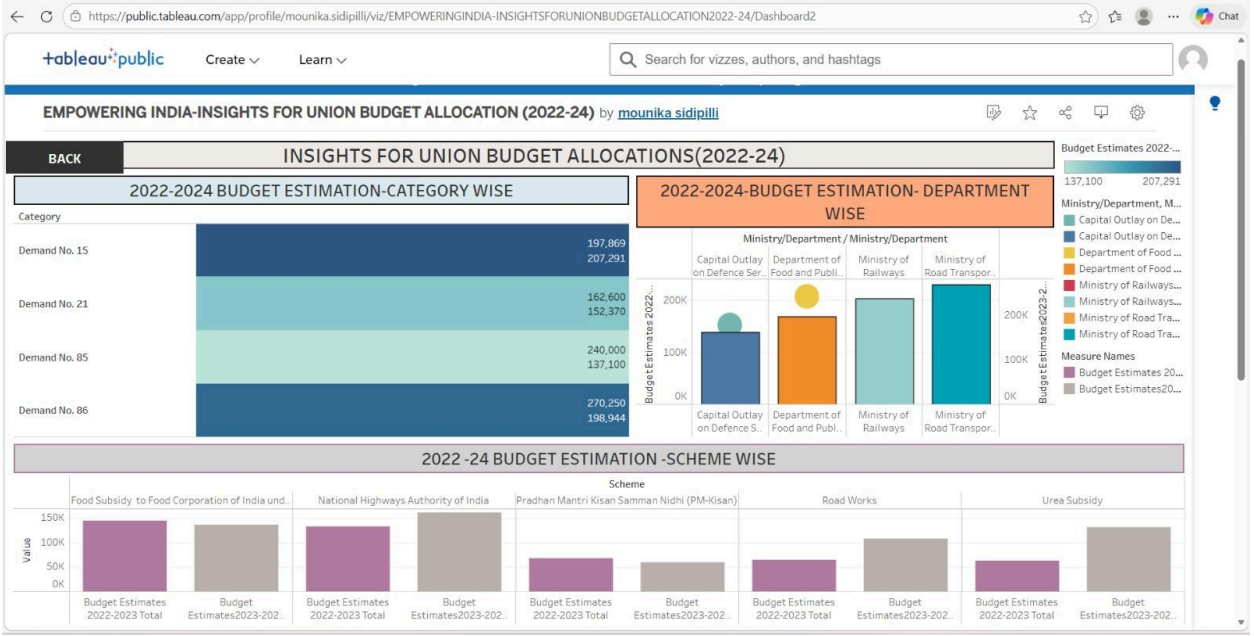
STEPS:

1. Prepare Your Dashboard or Story
2. Ensure your dashboard or story is complete and working as expected.
3. Clean up any unnecessary sheets or data to reduce file size.
4. Sign in to Tableau Public
5. In Tableau Desktop, go to File > Save to Tableau Public.
6. If you're not already signed in, a login window will appear.
7. Enter your Tableau Public credentials or sign up if you don't have an account.
8. Save and Publish
9. After logging in, you'll be prompted to name your workbook.
10. Click Save – Tableau will upload the workbook to your Tableau Public profile.
11. View Your Published Dashboard/Story
12. After uploading, your browser will open the published workbook on your Tableau Public profile.
13. Share the link
14. Embed it into a website
15. Set the workbook to public or hidden

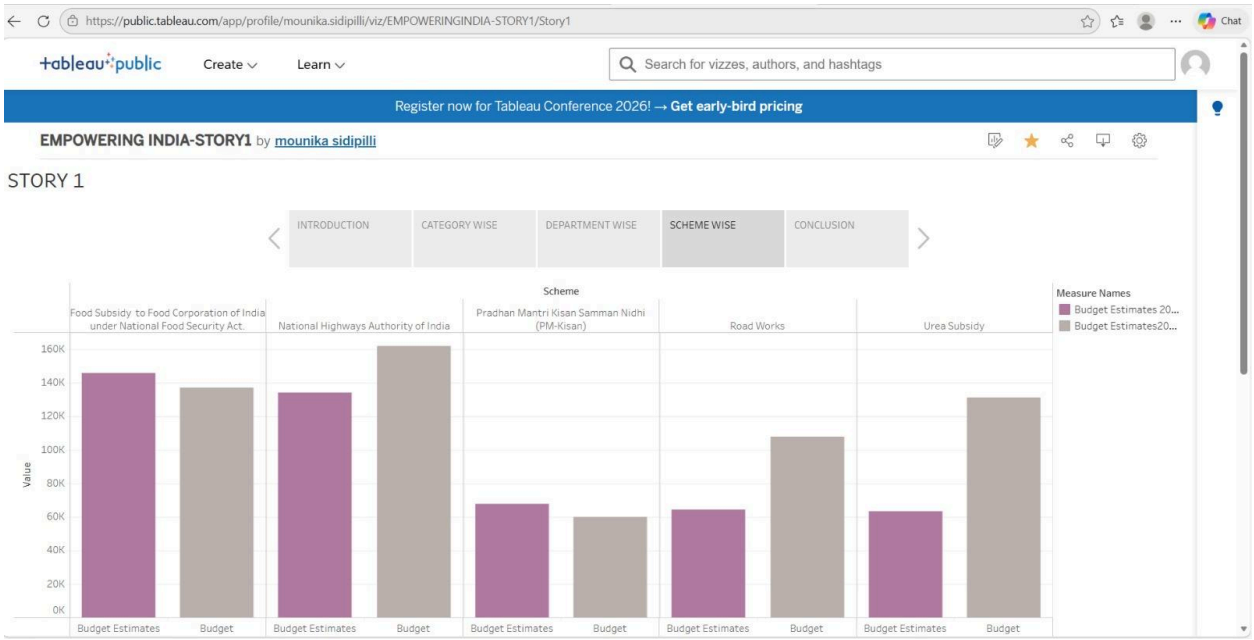
DASHBOARD 1



DASHBOARD 2



STORY 1



ACTIVITY-2: DASHBOARD AND STORY EMBED WITH UI WITH FLASK

PURPOSE:

To integrate Tableau dashboards and stories into a Flask web application interface.To provide a centralized and user-friendly platform for interactive Union Budget analysis.To combine data visualization and storytelling within a structured web environment.

USES:

Allows users to explore charts, apply filters, and view insights directly through the website.Presents budget trends and sustainable growth analysis in a clear, step-by-step format.Enhances accessibility, professionalism, and overall user experience of the project.

STEPS:

1. Prepare and finalize the Tableau Dashboard and Story with required filters and visualizations.
2. Publish the dashboard and story to Tableau Public or Tableau Server.
3. Open the published view and select the Share option to copy the iframe embed code.
4. Create a Flask project structure with app.py, templates, and static folders.
5. Create an HTML file (e.g., dashboard.html) inside the templates folder.
6. Paste the copied iframe embed code inside the HTML body section.
7. Adjust width, height, and responsiveness settings in the iframe for proper UI alignment.
8. In app.py, define a route and use render_template() to load the HTML page.
9. Run the Flask application using flask run or python app.py.
10. Open the local server in a browser and test interactivity, responsiveness, and filter functionality.
