ASSIGNMENT -1

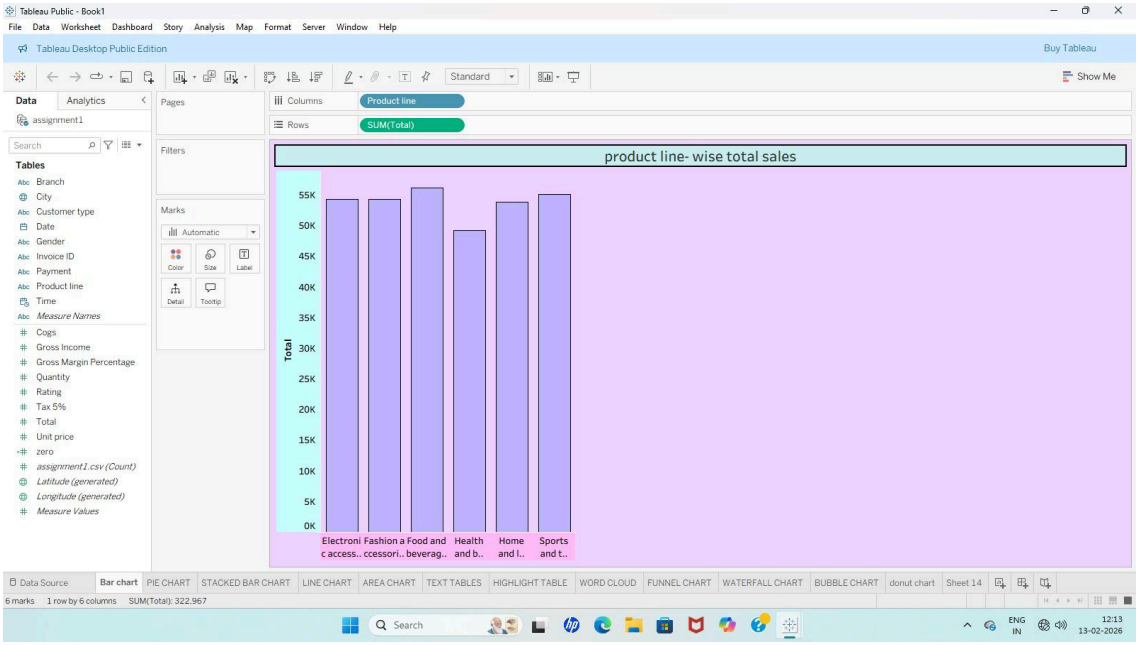
BAR CHART

Purpose:

This chart is used to compare the total sales of different product lines.It helps identify the highest and lowest performing product categories for better business decisions.

Step by step process

- Open Tableau → Click Connect → Text File → Load your dataset (assignment1.csv).
- Click on Sheet 1 to start creating the chart.
- Drag Product line → Drop into Columns shelf.
- Drag Total → Drop into Rows shelf.It will automatically show SUM(Total).
- From the Marks card → Select Bar(or click Show Me → Bar Chart).
- Double click on the title area.Type: "**Product Line Wise Total Sales"**Click OK.
- Right click on chart → Format → Change background colors.Adjust font size and alignment if needed.



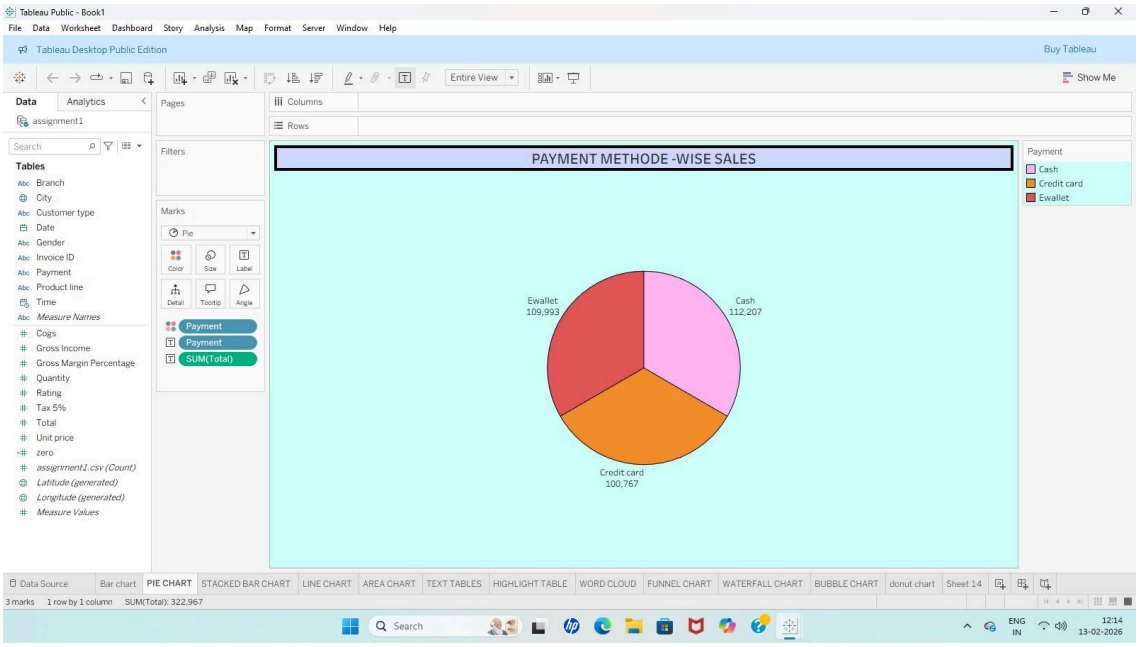
PIE CHART

Purpose:

This chart is used to show the distribution of total sales based on different payment methods.It helps identify which payment method is most and least preferred by customers.

Step by step process

- Open a new work sheet
- Drag Payment → Drop into Color in the Marks card.
- Drag Total → Drop into Angle (SUM(Total) will be created).
- Change Marks type to Pie.
- Drag SUM(Total) to Label and edit the title as "Payment Method – Wise Sales".
- Edit the Title → Type:"**Payment Method – Wise Sales"**

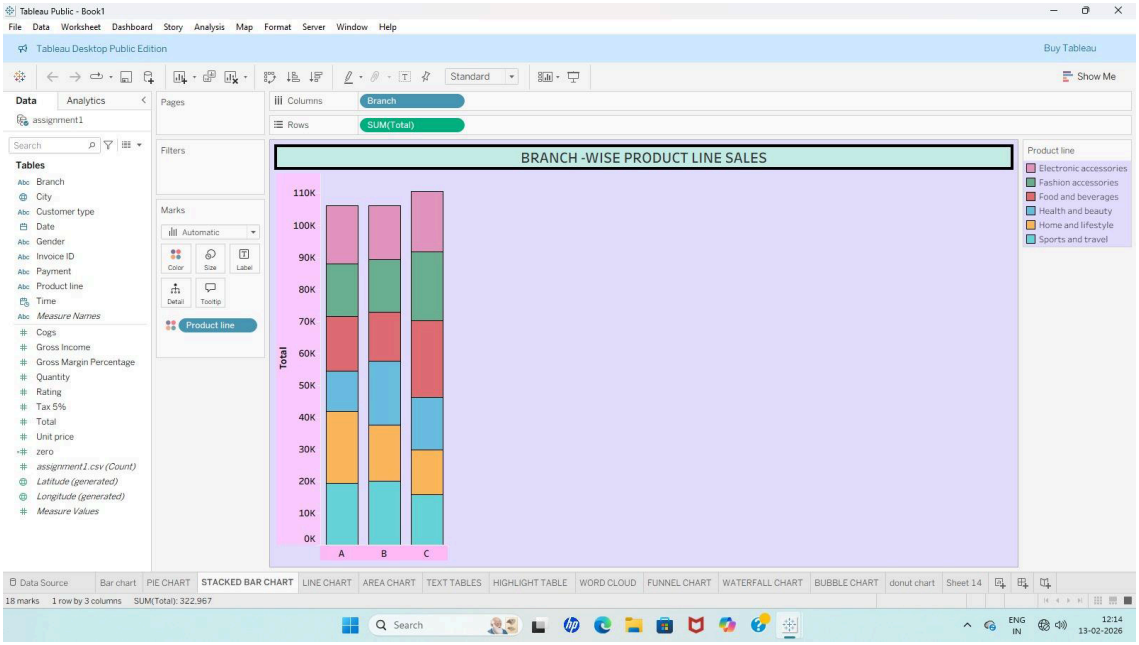


STACKED BAR CHART

Purpose: This chart is used to compare total sales of different product lines across branches.It helps identify which branch and product category contribute the most to overall sales.

Step by step process

- ➢ Open a new work sheet
- ➢ Drag Branch → Drop into the Columns shelf.
- ➢ Drag Total → Drop into Rows shelf (SUM(Total) will appear).
- ➢ Drag Product line → Drop into Color (in Marks card).
- ➢ Select Bar chart (or click Show Me → Stacked Bar Chart) and edit the title as"**Branch-Wise Product Line Sales**".

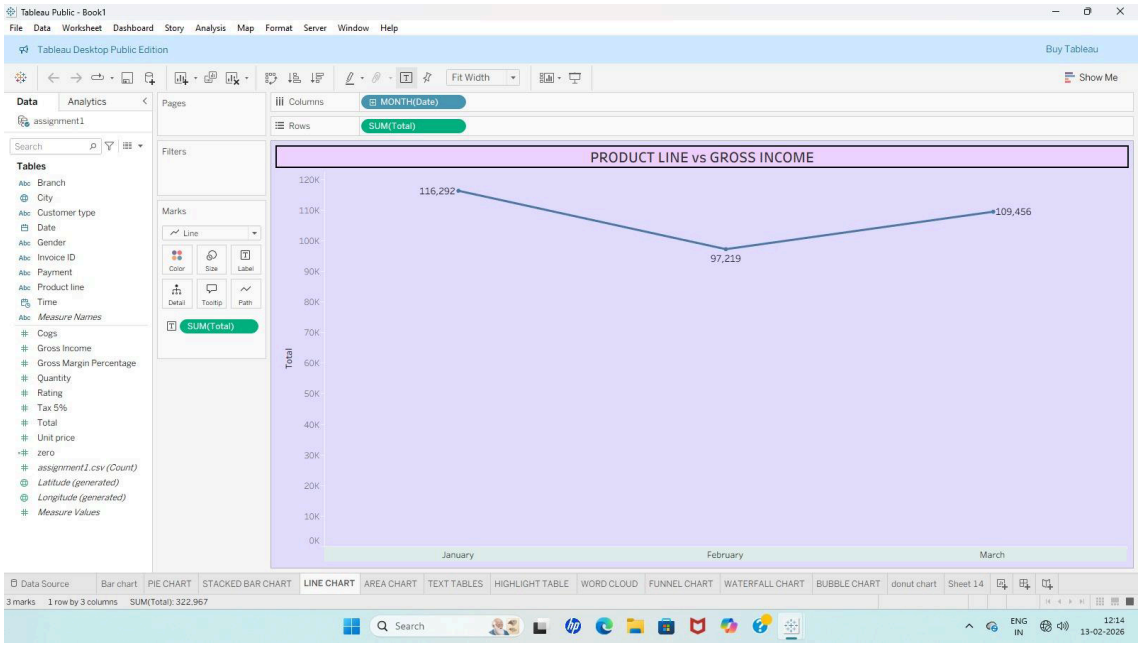


LINE CHART

Purpose: This chart is used to show the sales trend over different months.It helps analyze whether sales are increasing or decreasing over time.

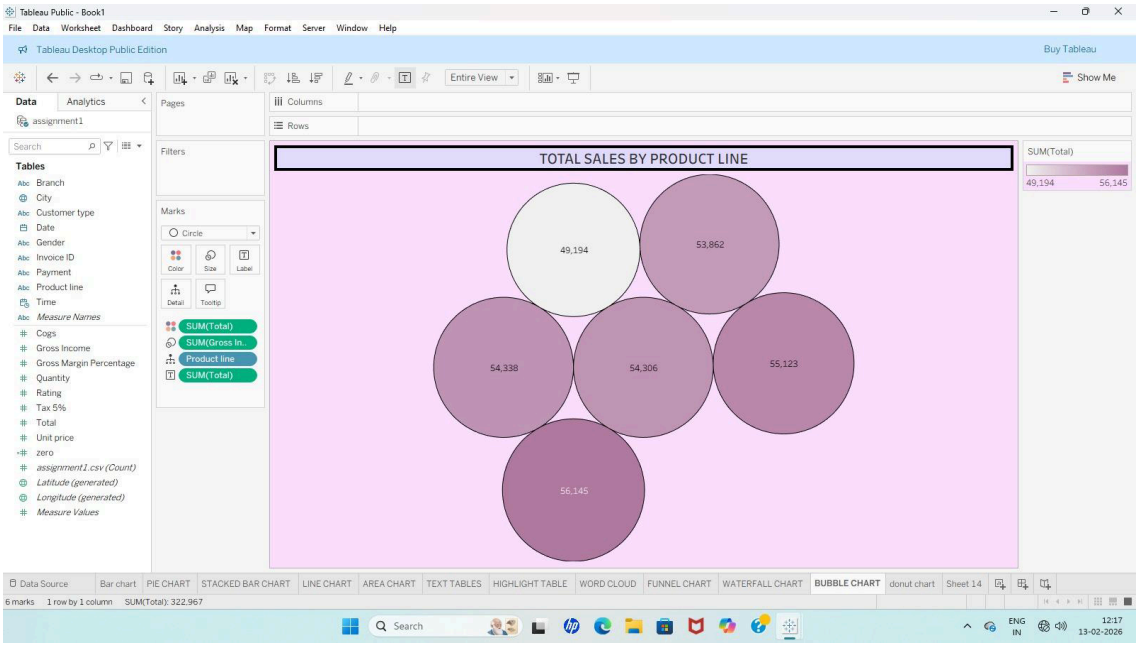
Step by step process

- Open a new work sheet
- Drag Date → Drop into Columns shelf → Change it to Month (MONTH(Date)).
- Drag Total → Drop into Rows shelf (SUM(Total) will appear).
- In the Marks card, select Line chart type.
- Drag SUM(Total) to Label (optional) and edit the title as“**Product Line vs Gross income**“.



BUBBLE CHART

Purpose : This chart is used to compare total sales of different product lines using bubble size.It helps quickly identify which product line has the highest and lowest sales.

Step by step process


- Open a new work sheet
- Drag Product line → Drop into Detail (Marks card).
- Drag Total → Drop into Size (SUM(Total) will appear).
- Drag Total → Drop into Label (to display sales values).
- Change Marks type to Circle (or select Show Me → Packed Bubbles) and edit the title as
- "Total Sales by Product Line".
